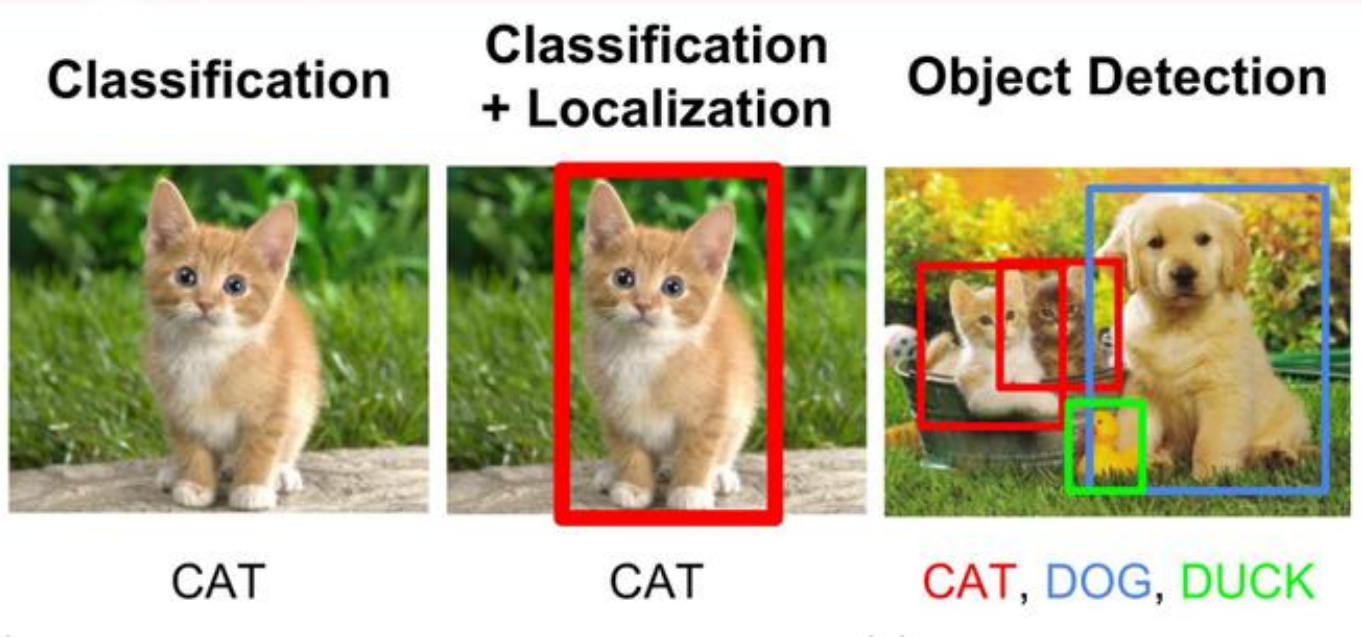
WHAT IS OBJECT DETECTION?

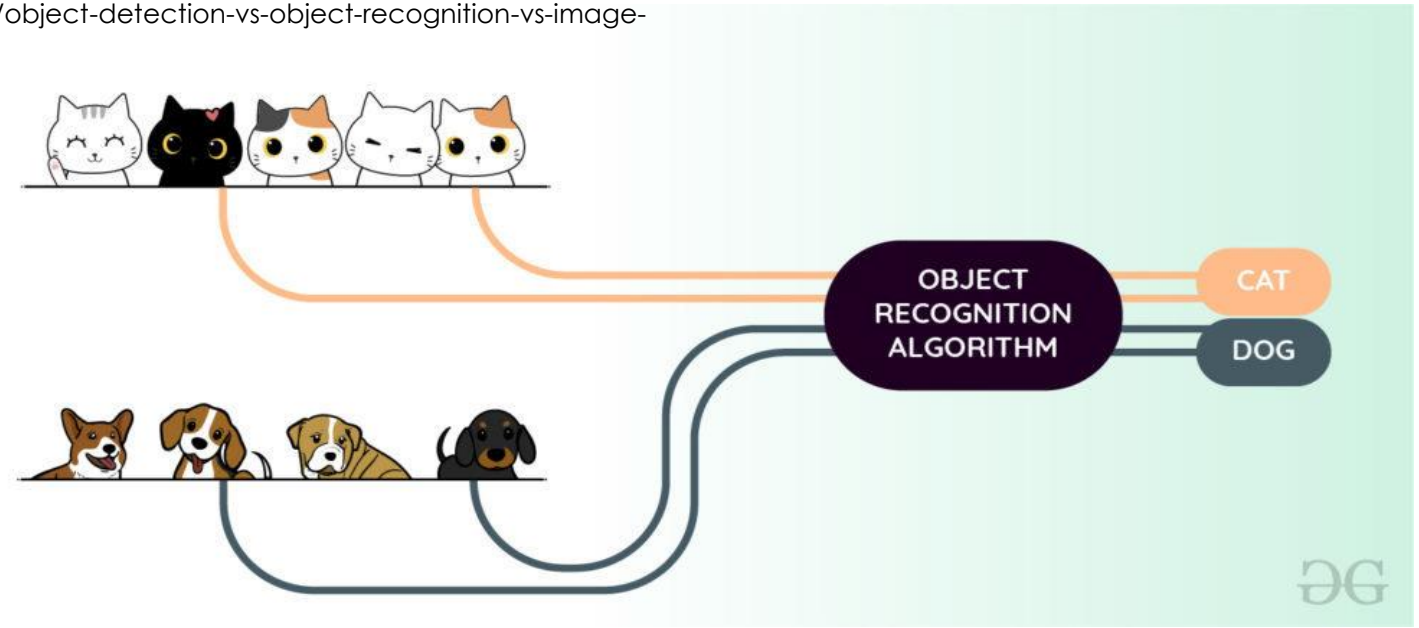
- Object Detection is a computer technology related to computer vision and image processing that deal with detecting instances of semantic object of certain class (such as human, building, car, table, dog, cat etc.).



WHAT IS OBJECT RECOGNITION?

- Object recognition is the technique of identifying the object present in images and videos. It is one of the most important applications of machine learning and deep learning. The goal of this field is to teach machines to understand (recognize) the content of an image just like humans do.

https://www.geeksforgeeks.org/object-detection-vs-object-recognition-vs-image-segmentation/



APPLICATIONS:

- **Driver-less Cars:** Object Recognition is used for detecting road signs, other vehicles, etc.
- **Medical Image Processing:** Object Recognition and Image Processing techniques can help detect disease more accurately. For Example, Google AI for breast cancer detection detects more accurately than doctors.
- **Surveillance and Security:** such as Face Recognition, Object Tracking, Activity Recognition (WALKING, WALKING_UPSTAIRS, WALKING_DOWNSTAIRS, SITTING, STANDING, LAYING), etc.

MODEL TRAINING STAGE

COCO Dataset

COCO is a large-scale object detection, segmentation, and captioning dataset.

COCO has several features:

1. Object segmentation
2. Recognition in context
3. Super pixel stuff segmentation
4. 330K images (>200K labeled)
5. 1.5 million object instances
6. 80 object categories
7. 91 stuff categories
8. 5 captions per image
9. 250,000 people with key points

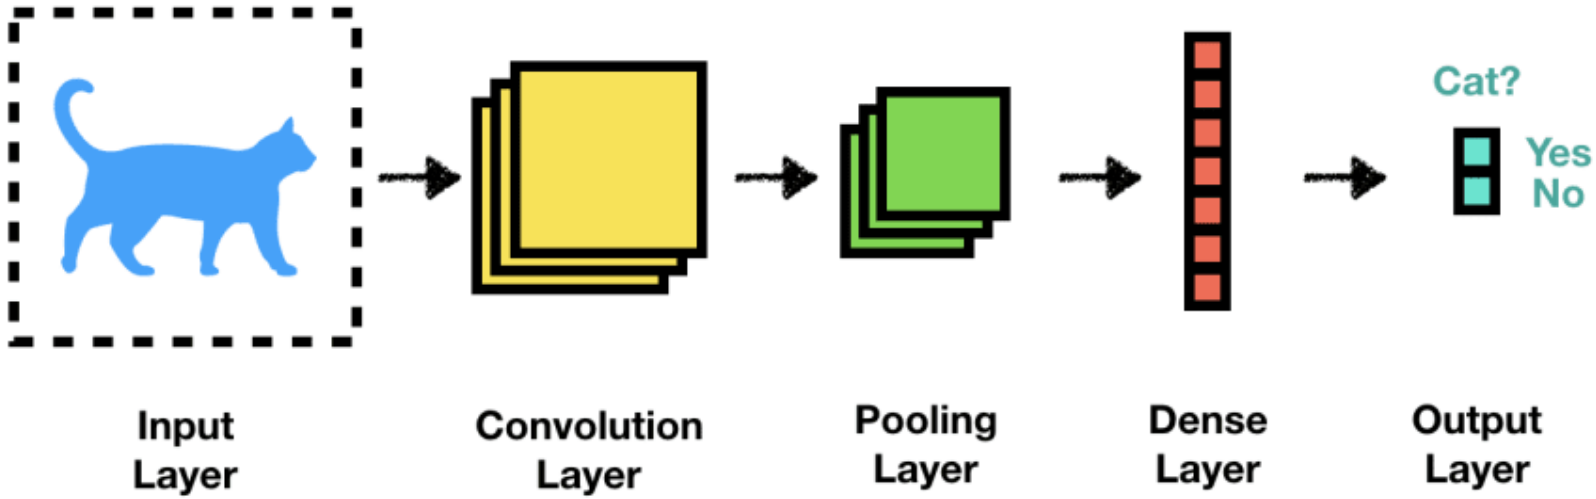
CONVOLUTIONAL NEURAL NETWORK (CNN) MODEL

- A Convolutional Neural Network (ConvNet/CNN) is a Deep Learning algorithm which can take in an input image, assign importance (learnable weights and biases) to various aspects/objects in the image and be able to differentiate one from the other.



https://towardsdatascience.com/convolutional-neural-network-a-step-by-step-guide-a8b4c88d6943

MODEL CONFIGURATION YOLO

- You only look once (YOLO) is a state-of-the-art, real-time object detection system. On a Pascal Titan X it processes images at 30 FPS and has a mAP of 57.9% on COCO test-dev.
- YOLOv3 is extremely fast and accurate. In mAP measured at .5 IOU YOLOv3 is on par with Focal Loss but about 4x faster. Moreover, you can easily tradeoff between speed and accuracy simply by changing the size of the model, no retraining required!
- YOLOv3 (You Only Look Once, Version 3) is a real-time object detection algorithm that identifies specific objects in videos, live feeds, or images. YOLO uses features learned by a deep convolutional neural network to detect an object. Versions 1-3 of YOLO were created by Joseph Redmon and Ali Farhadi.

TRAINING WEIGHT BY OURSELF USING DARKNET

Yolo v4, v3 and v2 for Windows and Linux

(neural networks for object detection)

Paper YOLO v4: https://arxiv.org/abs/2004.10934

Paper Scaled YOLO v4: https://arxiv.org/abs/2011.08036 use to reproduce results: ScaledYOLOv4

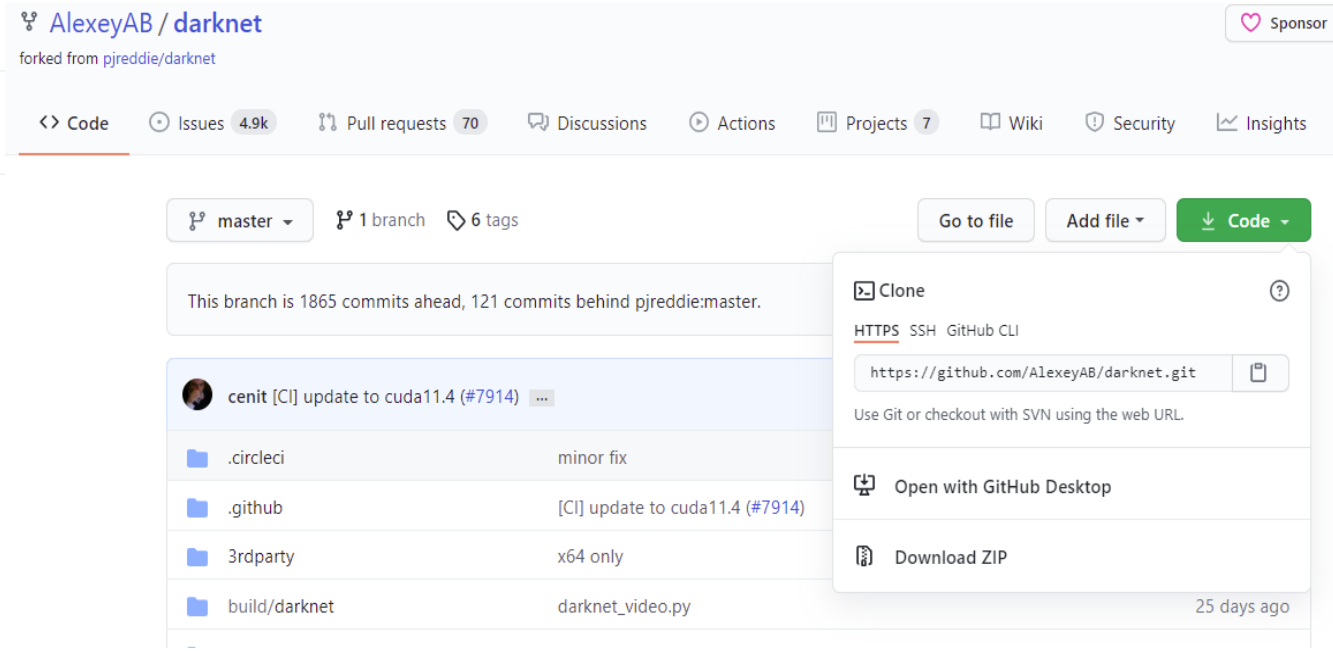
More details in articles on medium:

- Scaled_YOLOv4
- YOLOv4

Manual: https://github.com/AlexeyAB/darknet/wiki

Discussion:

- Reddit
- Google-groups
- Discord



https://github.com/AlexeyAB/darknet

Website : https://sites.google.com/view/christinedewi/home

朝陽科技大學 CYUT CHAOYANG UNIVERSITY OF TECHNOLOGY

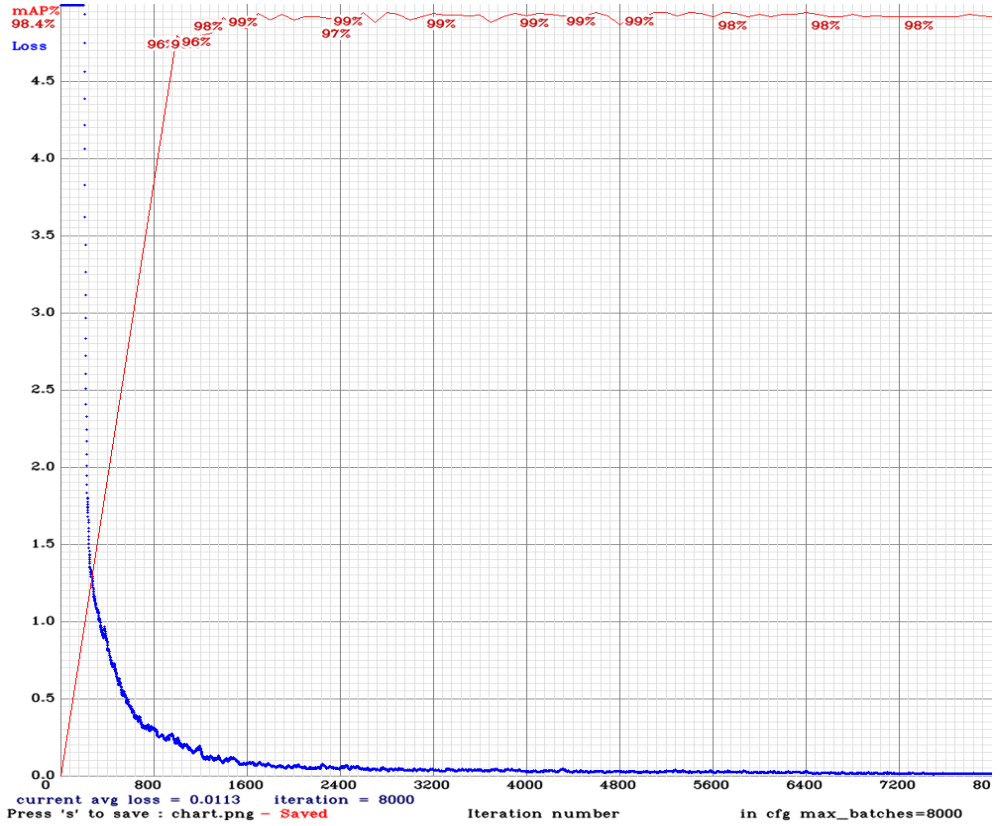
TRAINING WEIGHT BY OURSELF

How to train:

darknet.exe detector train cfg/coco.data yolov4.cfg yolov4.conv.137 -dont_show -mjpeg_port 8090 –map
darknet.exe detector train cfg/TT100K.data cfg/yolov3TT100K.cfg darknet53.conv.74 -map

- Train on **Amazon EC2**, to see mAP & Loss-chart using URL like: `http://ec2-35-160-228-91.us-west-2.compute.amazonaws.com:8090` in the Chrome/Firefox (**Darknet should be compiled with OpenCV**): `./darknet detector train cfg/coco.data yolov4.cfg yolov4.conv.137 -dont_show -mjpeg_port 8090 -map`

https://github.com/AlexeyAB/darknet



朝陽科技大學 CYUT CHAOYANG UNIVERSITY OF TECHNOLOGY

TESTING

How to test:

darknet.exe detector test cfg/coco.data cfg/yolov4.cfg yolov4.weights -ext_output -dont_show -out result.json < data/train.txt

darknet.exe detector test cfg/coco.data cfg/yolov4.cfg yolov4.weights -thresh 0.25 -dont_show -save_labels < data/new_train.txt

- To process a list of images `data/train.txt` and save results of detection to `result.json` file use: `darknet.exe detector test cfg/coco.data cfg/yolov4.cfg yolov4.weights -ext_output -dont_show -out result.json < data/train.txt`
- To process a list of images `data/train.txt` and save results of detection to `result.txt` use: `darknet.exe detector test cfg/coco.data cfg/yolov4.cfg yolov4.weights -dont_show -ext_output < data/train.txt > result.txt`
- Pseudo-labelling - to process a list of images `data/new_train.txt` and save results of detection in Yolo training format for each image as label `<image_name>.txt` (in this way you can increase the amount of training data) use: `darknet.exe detector test cfg/coco.data cfg/yolov4.cfg yolov4.weights -thresh 0.25 -dont_show -save_labels < data/new_train.txt`

Human Activity Recognition Using Smartphones Data Set

Download: Data Folder, Data Set Description

Abstract: Human Activity Recognition database built from the recordings of 30 subjects performing activities of daily living (ADL) while carrying a waist-mounted smartpl

Data Set Characteristics:	Multivariate, Time-Series	**Number of Instances:**	10299	**Area:**	Computer
Attribute Characteristics:	N/A	**Number of Attributes:**	561	**Date Donated**	2012-12-10
Associated Tasks:	Classification, Clustering	**Missing Values?**	N/A	**Number of Web Hits:**	1152801
